# SHARP

## PERFECT MIRROR

As dumpers are very big, the operator is unable to see the rear view and just front side of the dumper. Often this causes accidents. In order to avoid such accidents and for better and sharp view D.G.M.S. recommends to install at least two **Rear View Mirrors** on Operator's both side - Left & Right along with **Blind Spot Mirrors**.

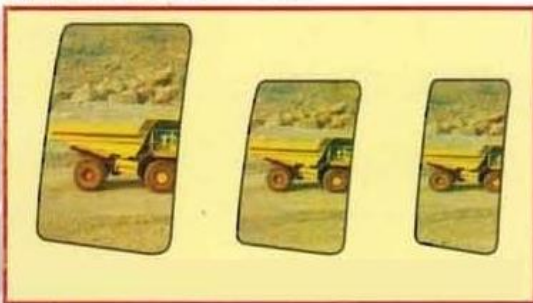

**Rear View Mirrors** are useful to see the rear portion i.e. rear tyre & back side of the dumper / H.E.M.M. The sizes are **11" X 17** and **20" X 29"**

**Blind Spot Mirror** is round in shape 11" Dia & depth not more than 2" for better and clear view is useful to see front bottom side of the dumper as well as front tyre also.

Technical Details of **SHARP** mirrors

- It is made by unbreakable material.
- It's shape is convex for clear view.
- It has better clarity than glass mirror.
- It is adjustable in any direction - Left, Right, Up, or Down for better view.
- It is light weight, thus mounting is easy.
